

Weekly Report

12/07/2015 - 12/14/2015

Jing XIA

December 14, 2015

1 Summary

This week I was in Beijing for 4 days and did not do much work.

2 Projects

2.1 Project 2 - DataScanner Project

The datascanner system still has some interface and interaction issues to fix. The system now allows selecting views on the tree to highlight the view both on the tree and in the matrix selector. The highlighting is a checkbox widget, which shows only with mouse hovering the logo.

Hongsheng and other students thought the scatter plots logos contain too much information to briefly depict their distribution. I am thinking of changing the scatter plot logos to heatmap logos of the same data distribution. Also, I will fix other issues mentioned in the group seminar.

3 Paper Reading and Miscellaneous

-

4 To Do List

1. DataScanner paper writing.
2. VIS paper idea initialization.
